Chapter 1

Logic

1.0.1 Logic Factsheet

De Morgan's laws

$$\neg (P \land Q)$$
 is equivalent to $\neg P \lor \neg Q$
 $\neg (P \lor Q)$ is equivalent to $\neg P \land \neg Q$

Commutative laws

$$P \wedge Q$$
 is equivalent to $Q \wedge P$
 $P \vee Q$ is equivalent to $Q \vee P$

Associative laws

$$P \wedge (Q \wedge R)$$
 is equivalent to $(P \wedge Q) \wedge R$
 $P \vee (Q \vee R)$ is equivalent to $(P \vee Q) \vee R$

Indempotent laws

$$P \wedge P$$
 is equivalent to P
 $P \vee P$ is equivalent to P

Distributive laws

$$P \wedge (Q \vee R)$$
 is equivalent to $(P \wedge Q) \vee (P \wedge R)$
 $P \vee (Q \wedge R)$ is equivalent to $(P \vee Q) \wedge (P \vee R)$

Absorption laws

$$P \lor (P \land Q)$$
 is equivalent to P
 $P \land (P \lor Q)$ is equivalent to P

Double Negation law

 $\neg \neg P$ is equivalent to P

1.0.2 Set operation definitions

The *intersection* of two sets A and B is the set $A \cap B$ defined as follows:

$$A \cap B = \{x \mid x \in A \text{ and } x \in B\}$$

The *union* of A and B is the set $A \cup B$ defined as follows:

$$A \cup B = \{x \mid x \in A \text{ or } x \in B\}$$

The difference of A and B is the set $A \setminus B$ defined as follows:

$$A \setminus B = \{x \mid x \in A \text{ and } x \notin B\}$$

See that

$$x \in A \cap B = x \in \{y \mid y \in A \text{ and } y \in B\}$$

where y is a dummy variable. So we can also write that

$$x \in A \cap B = x \in A \land x \in B$$

The same can be shown for the union and difference.

1.0.3 Distributivity of set operations

We show

$$x \in A \cap (B \cup C)$$
 is equivalent to $x \in (A \cap B) \cup (A \cap C)$

By analysing their logical forms:

$$x \in A \cap (B \cup C)$$

$$= x \in A \land x \in (B \cup C)$$

$$= x \in A \land (x \in B \lor x \in C)$$

and

$$\begin{split} x &\in (A \cap B) \cup (A \cap C) \\ &= x \in (A \cap B) \vee x \in (A \cap C) \\ &= (x \in A \wedge x \in B) \vee (x \in A \wedge x \in C) \\ &= [(x \in A \wedge x \in B) \vee x \in A)] \wedge [(x \in A \wedge x \in B) \vee x \in C)] \\ &= x \in A \wedge [(x \in A \vee x \in C) \wedge (x \in B \vee x \in C)] \\ &= [x \in A \wedge (x \in A \vee x \in C)] \wedge (x \in B \vee x \in C) \\ &= x \in A \wedge (x \in B \vee x \in C) \end{split}$$

We can also show, in a similar manner, that

$$x \in A \cup (B \cap C)$$
 is equivalent to $x \in (A \cup B) \cap (A \cup C)$

1.0.4
$$x \in A \setminus (B \cap C) = x \in (A \setminus B) \cup (A \setminus C)$$

We can also show

$$x \in A \setminus (B \cap C) = x \in (A \setminus B) \cup (A \setminus C)$$

See that

$$\begin{array}{ll} x \in A \setminus (B \cap C) \\ = x \in A \wedge \neg (x \in B \cap C) \\ = x \in A \wedge \neg (x \in B \wedge x \in C) \\ = x \in A \wedge (x \notin B \vee x \notin C) \\ = (x \in A \wedge x \notin B) \vee (x \in A \wedge x \notin C) \\ = (x \in A \setminus B) \vee (x \in A \setminus C) \\ = x \in (A \setminus B) \cup (A \setminus C) \end{array} \qquad \begin{array}{ll} \text{(Definition of } \setminus) \\ \text{(Definition of } \setminus) \\ \text{(Definition of } \setminus) \\ \text{(Definition of } \cup) \end{array}$$
